

CL1002 Programming Fundamentals	Lab 03 Tasks
---------------------------------------	-----------------

NATIONAL UNIVERSITY OF COMPUTER AND EMERGING SCIENCES

Fall 2025

LAB EXERCISES

Task 1: GitHub Profile Setup

Create a GitHub account (if you don't already have one) and update your profile by adding your full name, a short bio, and a professional profile picture.

Task 2: First Repository

Create a new repository named PF-Lab03-[YourRollNumber]. Add a README.md file describing yourself and your programming interests.

Task 3: Branch and Commit

Create a new branch in your repository named lab03-branch. Inside it, create a file named aboutme.md containing your name, degree program, and one hobby. Commit the file.

Task 4: Pull Request and Merge

Raise a pull request to merge your lab03-branch into the main branch. Successfully merge and delete the branch after merging.

Task 5: Markdown Formatting

Edit your README.md to include at least:

- One heading
- One ordered list
- One unordered list
- One bold + italic statement

Commit the changes.

Task 6: Hello World in C

Write a C program that prints:

- Hello World
- Welcome to Programming Fundamentals Lab

Compile and run it successfully in Dev-C++.

Task 7: Input and Output in C

Write a C program that asks the user for their name and age, then prints:

Hello [Name], you are [Age] years old.

Task 8: Simple Calculator in C

Write a C program that takes two integers as input and displays their sum, difference, product, and quotient.

Task 9: Precision in C

Write a C program that asks the user for a floating-point number and prints it with 3 decimal places and with 6 decimal places using printf precision specifiers.

Task 10: Escape Sequences Practice

Write a C program that prints the following using escape sequences:

- Full Name: [Your Name]
- FAST NU ID: [Your Roll]
 - \tTabbed Line
 - \nNew Line
